Differential distribution of group I metabotropic glutamate receptors. The metabotropic glutamate receptors (mGluRs) are family C G-protein-coupled receptors that participate in the modulation of synaptic transmission and synaptic plasticity. Metabotropic glutamate receptor 1a antibody polyclonal (PA5). The metabotropic glutamate receptors are a family of G-protein-coupled receptors widely distributed in the central nervous system, acting to modulate synaptic transmission. Metabotropic glutamate receptors in vertebrate retina - Springer. My research is focused on understanding the contribution of metabotropic glutamate receptors to synaptic function, mainly using the cerebellar cortex as a model system. Metabotropic glutamate receptors - Guide to Pharmacology. The metabotropic glutamate receptors, or mGluRs, are a type of glutamate receptor that are active through an indirect metabotropic process. They are members of the metabotropic glutamate receptor family. Multiple presynaptic metabotropic glutamate receptors modulate excitatory and inhibitory synaptic transmission in hippocampal area CA1. Metabotropic glutamate receptors (mGluRs) are found throughout thalamus and cortex and are clearly important to circuit behavior in both structures, and so are important for understanding the function of the metabotropic glutamate receptor 1a polyclonal antibody for Western blot, immunofluorescence, immunocytochemistry, immunohistochemistry (frozen).
